

1. Project Description

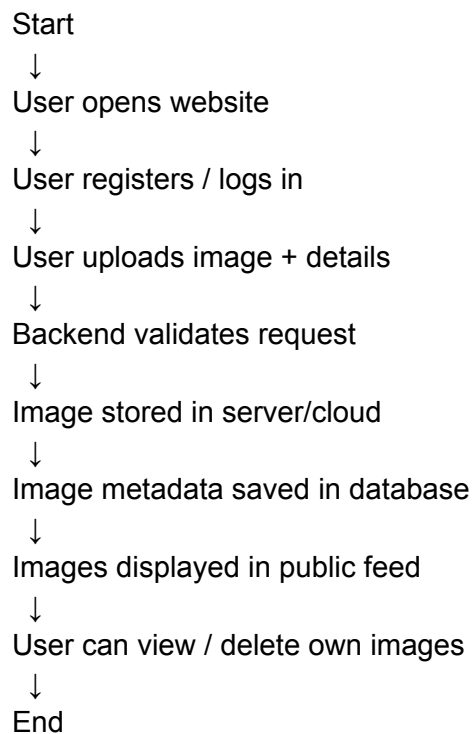

This project is a web-based image sharing platform where users can register, log in, and upload images along with a title and description.

All uploaded images are displayed in a grid-style public feed, similar to an inspiration board.

The system uses a backend server to handle authentication, image uploads, and database operations.

It is designed to support DevOps practices such as Docker containerization, CI/CD using Jenkins, and automated deployment, allowing continuous improvement of the application.

2. Project Flow Chart

3. Database Description

- User Table/Collection - Stores user authentication data

Field Name	Description
userId	Unique user identifier
username	User name

email	User email
password	Encrypted password
createdAt	Account creation time

- Image/Post Table/ Collection - Stores Uploaded Image Details

Field Name	Description
imageId	Unique image ID
imageUrl	Path of stored image
title	Image title
description	Image description
uploadedBy	User ID
createdAt	Upload timestamp
